Profile

I am a full-stack web developer with a focus on Django backend. I've always been enthralled by the way technology has allowed me to use my creativity in ways previously unimaginable. With every form of it, I am presented with new challenges that I can't wait to solve and come out of better than I was when I went into it. I'm ready to take that attitude into any opportunity I am presented with.

Projects

See In Portfolio*

Devshark Website / Freelance Website

My freelancing website. Showcases my skills and abilities. Gives contact information through a form using the Django email backend.

What this project taught me: Mobile Support, GSAP animations, Django email backend

Plumber's Website / Website For A Small Business

Client website where customers can look at the business and get in touch with the owner through an email form.

What this project taught me: Django email backend, form submission, meeting client's expectations,
